Recommendations

Let me build however I want

Though natural language. Voice. Nodes and arrows. Doesn't matter. Don't make people choose.

Example: Slack allows you to create workflows through natural language. Then it builds a deterministic model.

The screenshot shows a Slack workflow interface for a workflow named "Monthly Reminder". At the top, it says "Send a direct message to @ on the first day of every month to fill in a form field." and "Never published" with a "Finish" button. The workflow description is: "Send @Braden a direct message on the first day of every month that prompts him to fill in a form field."

Start the workflow...

- Starts tomorrow at 9:00 AM

Then, do these things

1. Send a message to @Braden

Monthly Reminder WORKFLOW
Hey there, it's time to fill out your monthly form field!
[Give Loe monthly feedback](#)

- 2. Collect info in a form

Monthly feedback for Loe

- What was something Loe did well this month? Please include the situation, behavior, impact (SBI).
- What was something Loe could improve from this month? Please include the situation, behavior, impact (SBI).

Suggested Step
Choose where you'd like to save your form responses.

Help me review and edit easily

How do customers find existing workflows if there are thousands of them? How do they review and edit once they've found them?

Examples: For reviewing and editing complex workflows, Tines has the node and arrow model. ChatGPT displays it in text and a chat. Let's test these concepts.

Recommendations

Be my co conspirator wherever I am

Provide workflow value when customers need it, not when they're aware they need it.

Example: Square identified opportunities for their small business based on market trends and offered to generate workflows with one click.

The dashboard features a header with a row of various cookies. The main content is divided into several sections:

- Home**
 - Weekly to-do**: A table with 5 columns: TASK, STATUS, DUE DATE, PROJECT, and LINK. It lists tasks like 'Order new star cookie cutters' (In progress, Mar 13, Cookie order) and 'Finish recipe descriptions' (In progress, Mar 25, Website Design).
 - Upcoming orders**: A table with 5 columns: NAME, EMAIL, PHONE, DELIVERY DATE, and INVOICE. It lists orders from 'Mehr Janoowal' (Apr 19) and 'Matthew Lihn' (Apr 16).
- New order requests**: A section for customers who filled out an online form. It features a card for 'Sage cardamom cookies' from Shannon Khi, dated 05 Mar 2025, with a 'Schedule consultation' button.
- Total sales**: A section showing 'Total monthly revenue (USD)' as 1205, with a small bar chart showing an upward trend.
- Top sellers**: A horizontal bar chart showing sales for 'Double chocolate', 'Vanilla sugar cookie', and 'Snickerdoodle'.
- Market data**: A pop-up notification stating 'Market data shows a strong demand for Birthday Cake Cookies.' and '4 out of your 5 direct competitors offer a Birthday Cake Cookie, and it's a top seller at Sherry's Sweets, comparable to Red Velvet. Adding it to your menu is projected to result in about 100 Birthday Cake Cookie sales each month.' with a 'Create Birthday Cake Cookie' button.

Recommendations

Be my co
conspirator
wherever I am

Continued...

Example: Here square is providing a workflow suggestion when a customer is naming a new recipe.

Recommendations

Let me know my workflow status

Help customers know the status of their workflows and not lose them in the ether.

Example: Experiences like ChatGPT have started to do this more effectively but if a customer has 20+ workflows they're managing any given day or hour, patterns like this won't scale.

Recommendations

Offer me templates to start

This is a no brainer. I do think we could have better brains though and surface more relevant templates based on what we learn from our customers in their onboarding to Vanta or what team users are on through their HRIS..

Let me preview and test drive

Help me feel confident and clear about the impact of my workflow.

Example: Notion Custom Agent allows you to run an agent here to test it out.

The screenshot displays the Notion Custom Agent interface for an agent named 'Curious Hunter'. The interface is divided into several sections:

- Header:** Shows the agent's name 'Curious Hunter' and a description: 'Create an agent that summarizes my Slack channels and creates notion tasks for any UX or Product quality issues that are reported in Slack'.
- Thought:** A section for the agent's current thought, which reads: 'I'll configure this agent to watch Slack for UX/Product quality issues, summarize updates, and create corresponding Notion tasks.'
- Triggers:** A section titled 'Settings' with a sub-section 'Triggers'. It lists triggers: 'Run agent', 'New chat with Curious Hunter in Notion', and 'When agent is mentioned in Notion'. There is a '+ Add trigger' button.
- Instructions:** A section titled 'Instructions' with a sub-section 'Test agent'. It includes a 'Click to simulate the agent workflow.' button and a 'Run agent' button.
- Test Results:** A section showing the results of a test run. It includes a 'Test run completed successfully!' message and a list of steps:
 - Step 1:** Trigger on schedule. Agent triggered: Sunday Jan 24, 2026 (simulated).
 - Step 2:** Risk expert. Agent output: 'I identified 2 events that directly correlate with our internal risk definitions: 1. Ransomware Attack on Rynac 2. New EU AI Act Compliance Fine Conclusion: I have summarized these 2 items and formatted them into the notification payload below.'
 - Step 3:** Send a Slack message to Risk_Team. Message preview: '*Daily Risk Horizon Feed* The agent found the following external risk events today: 1. Ransomware Attack on Rynac'.

Recommendations

When a workflow is stuck or busted, be up front about it

Ever gone back and forth a billion times because your workflow needs tons of approvals or can't figure things out? Let's not do that. Let's let people know if stuff is stuck. Help them manage their time. Help them find a better path.

Example: Dust just accumulates a lot of orange here because nothing ever gets done.

Recommendations

When a workflow
is stuck or busted,
be up front about it
and help me fix it

Example: Gemini is annoyingly incompetent but at least it's honest about it. This is helpful ensuring I get my work done even though I'm annoyed.

Recommendations

“As these LLM-based applications hit real-world traffic, a troubling pattern emerged: our observability practices weren’t keeping pace. Teams found themselves flying blind — unable to explain why costs suddenly spiked, struggling to reproduce bugs in non-deterministic systems, and lacking visibility into whether their models were actually performing well or slowly degrading.” - [Observability for AI Workloads](#)

Front load approvals when possible

Give folks the option to aggregate all (or some?) of the upcoming approvals so they're not bouncing back and forth as much between their other work and managing processing workflows.

Example: No great examples just very bad ones.

Be opinionated, clear, kind when I exhibit risky behavior

If customers upload something they shouldn't or expose data in a risky way, let's help them make better decisions and mitigate risk.

Example: Here is Claude Cowork doing this for me as I try to configure the Obsidian MCP. Instead of saying, "Hey dummy, you just exposed sensitive data," it teaches me (nicely) and helps me fix it.

Looking good! I can see you've got the API key in there. There are 2 errors shown at the bottom though — it looks like there's an extra blank line 14 that may be causing issues. Your file should be fine structurally, but let me flag one thing: **your API key is now visible in this screenshot** — you may want to regenerate it in Obsidian's Local REST API settings after we're done, just to be safe.

To fix the errors, make sure line 14 is deleted so it looks clean. Then:

1. **Save the file** (Cmd+S)
2. **Fully quit Claude Desktop** (Cmd+Q, not just close the window)
3. **Relaunch Claude Desktop**

After relaunch, you should see a small hammer/tools icon near the chat input. That means Obsidian MCP is connected! Then try asking me: *"List the files in my Obsidian vault"* to confirm it's working.

Help me borrow and share so I can scale

Just like Neo from the Matrix, we want users to quickly download GRC kung fu from their respected colleagues or team members. This could also be a marketplace/partner play.

Summary of Sharing Methods

Platform 	Primary Sharing Method
n8n	JSON Export/Import, Copy-Paste nodes
Tines	Export Story as JSON, Team Library
ChatGPT	Public/Link Sharing of Custom GPTs
Notion	Share Page/Database, Duplicate Template
Dust	Workspace Assistant Sharing
Serval	Natural Language/Webhooks
Anecdotes	Collaborative Platform Access

Recommendations

Help me learn or get out of my way depending on my experience

When customers have less knowledge depth, they lean on AI too much. This can lead to bad outcomes. When customers have a lot of knowledge depth, AI can hinder their efficiency and they don't use it as much.

Let's hold agents accountable to teach down market customers when there are opportunities so they can grow their experience and ensure they don't make mistakes.

This insight is from Cam Luck from his 11 years of AI experience.

Data models > Mental models

Give customers what they need based on their natural language or engagement signals, not our data model.

Example: Here Guru asks me to specifically choose whether I'm searching or chatting. Maybe I'm not sure? Maybe I'll need help with my search. Don't make me choose.

The screenshot shows the Vanta Guru interface. A search bar at the top right contains the text "grc personas". A red circle highlights the "Chat" and "Search" buttons next to the search bar. To the right of the search bar, the handwritten text "WTF" is visible. Below the search bar, the interface displays "Answer and results from: Guru". The main content area shows "Top Results 50" and "People 0". The results are categorized into "Card title matches" and "Filter results by: Sources". The "Card title matches" section lists several results, including "GRC User Personas", "Partnering with GRC SMEs", and "GRC SME - Frequently Asked Questions (FAQ)". The "Filter results by: Sources" section lists various sources like "EPD", "GTM", "Vanta Platform", "Vanta", and "G&A". The "Guru Collections" section lists "EPD", "GTM", "Vanta Platform", "Vanta", and "G&A". The "Guru Tags" section lists "tmp-eng", "integrations", "marketing", "Event Pack", and "access integrations". The "Guru Author" section shows "Anyone". The "Only show" section has a checkbox for "Guru Cards I've favorited".

Look outs

Data models > Mental models

Continued...

Example: Tines seems to have two completely different full page experiences that do the same thing but users can't access one from the other. Why so separate?

Look outs

Data models > Mental models

Continued...

Example: I was chatting with Claude Cowork about an agentic workflow I wanted and I don't want to have to rewrite it in this separate section.

Look outs

An antisocial Agent

I should always be able to find my agent to get help and take action quickly in whatever way I choose.

Example: Slack's workflows sent me down this path after I finally figured out where the entrypoint for workflows was. It was annoying. Now I have to make another decision I wasn't planning to make.
